Meet Cell

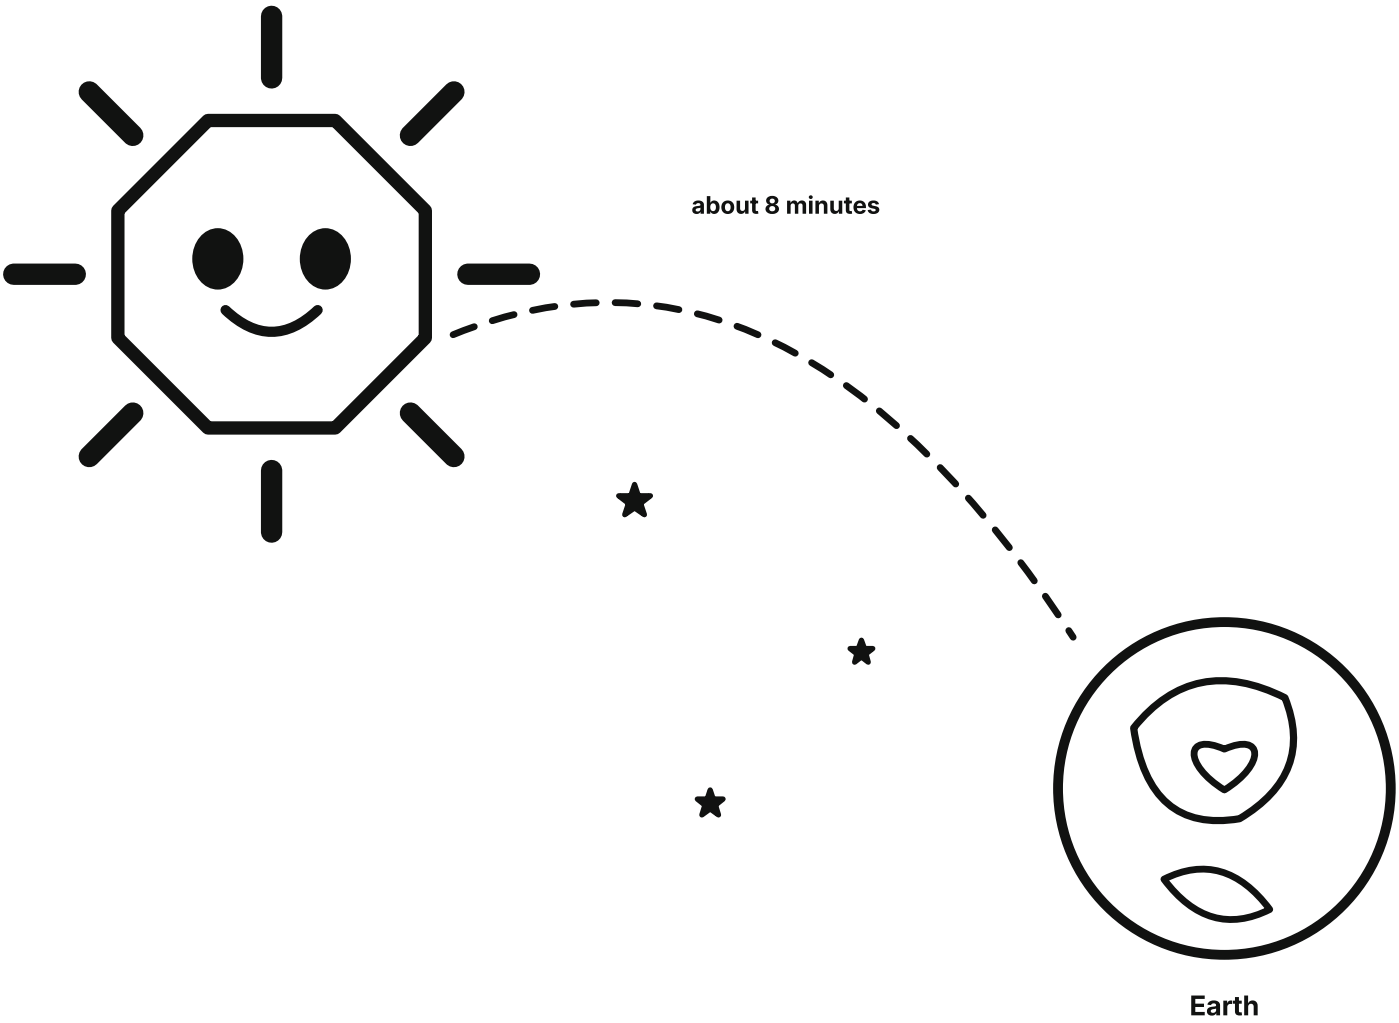

Cell is a little solar heart. The dark squares are solar cells. The orange edge is the frame. The tiny sun sits on Cell's shoulder.

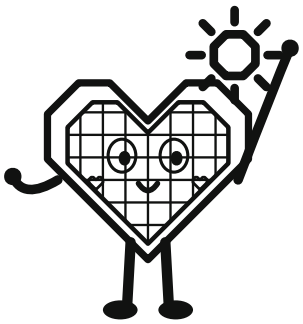

Colour Cell in warm orange, sunny yellow, and any colours you love.

The sun is a star

Our sun is a star. Its light takes about eight minutes to travel through space and reach us. Colour the sun and the long path of its light.

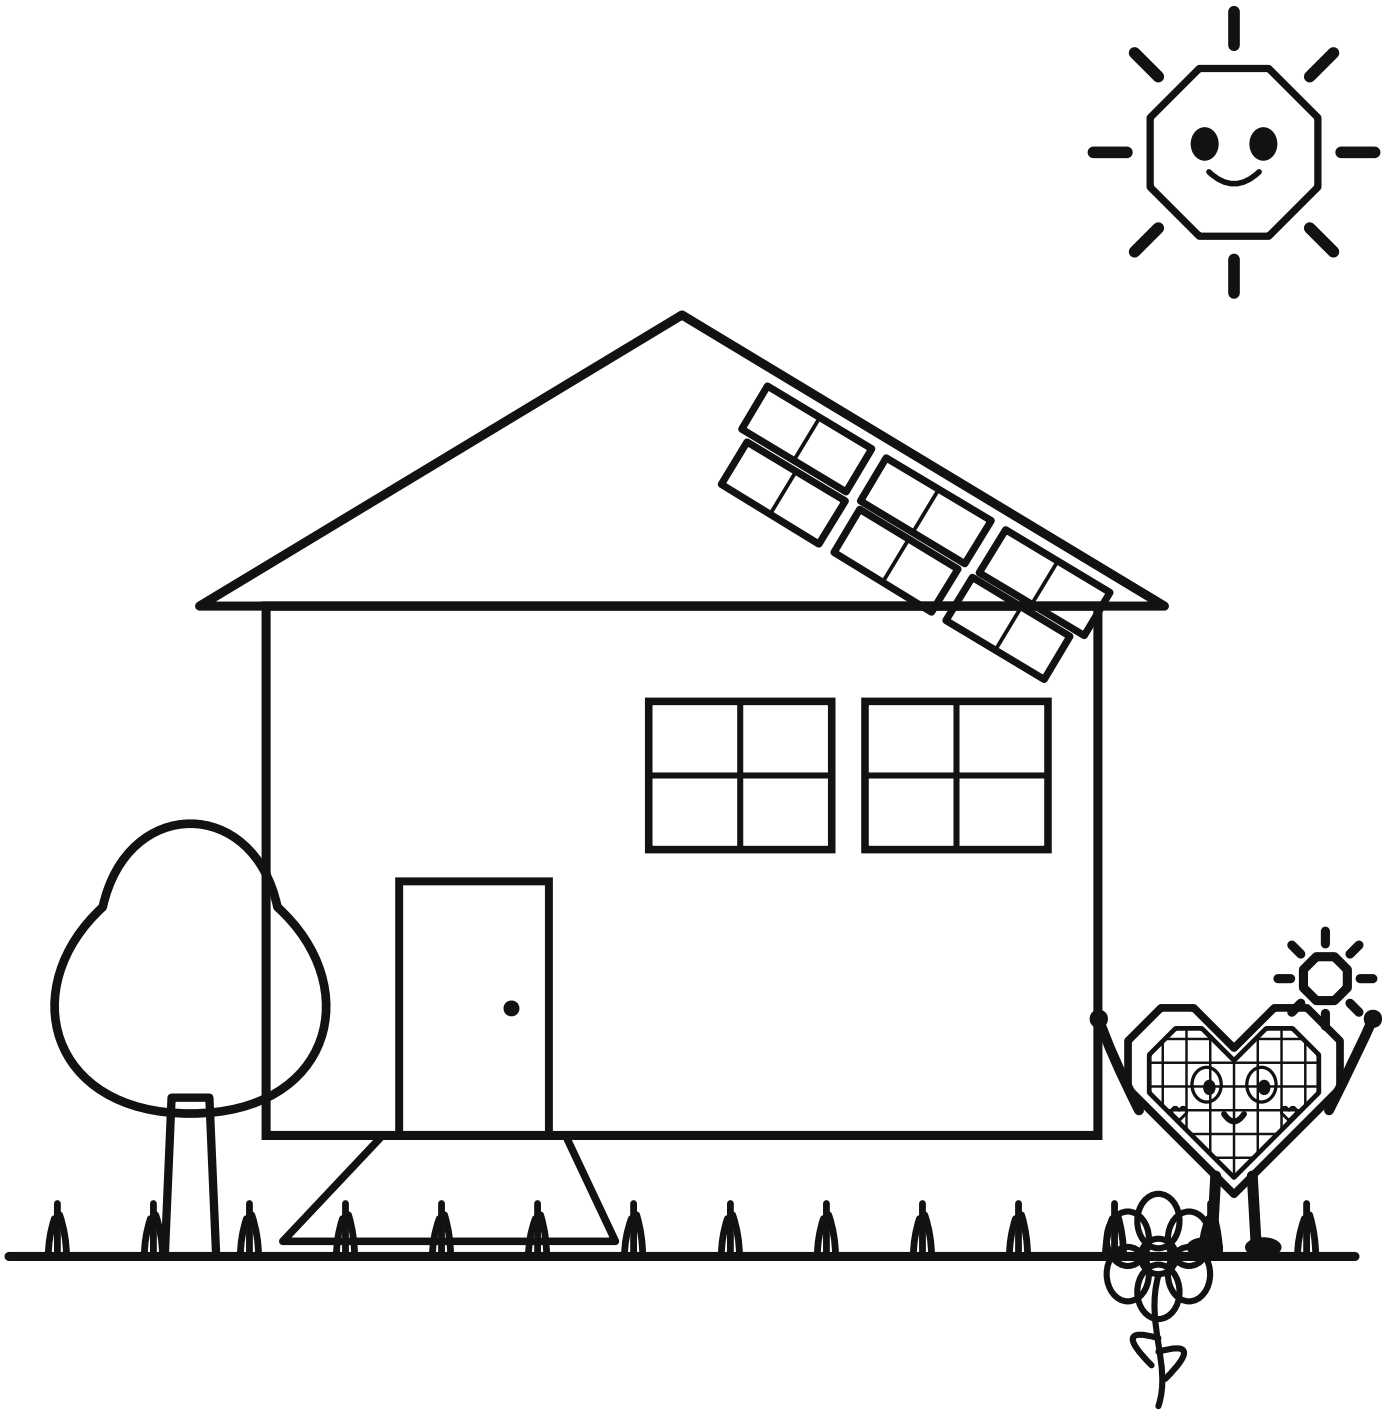

Never look straight at the real sun. It can hurt your eyes.

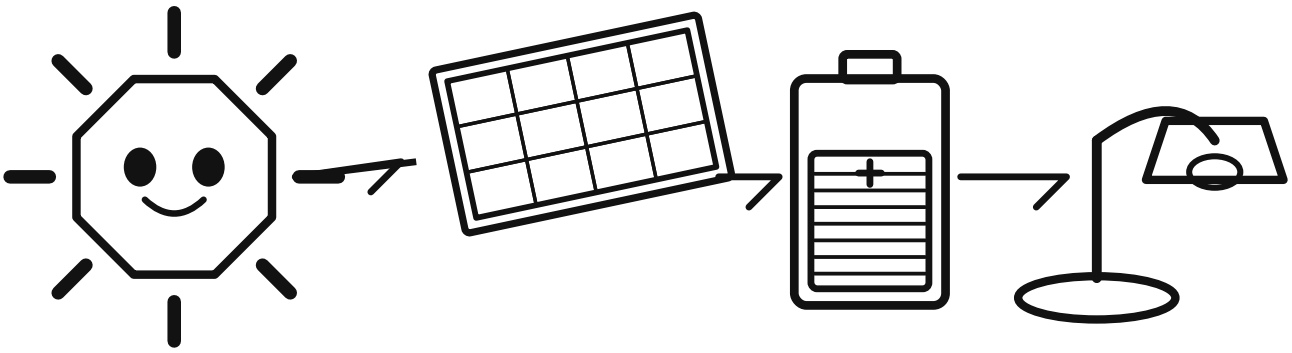

A roof full of sunshine

Solar panels sit in the sun and turn light into electricity. Colour this home and the panels on its roof.

Sunshine for later

When the sun is up, panels can make electricity. A battery can store some of that electricity, so a lamp can still shine after dark.

3 battery

4 lamp

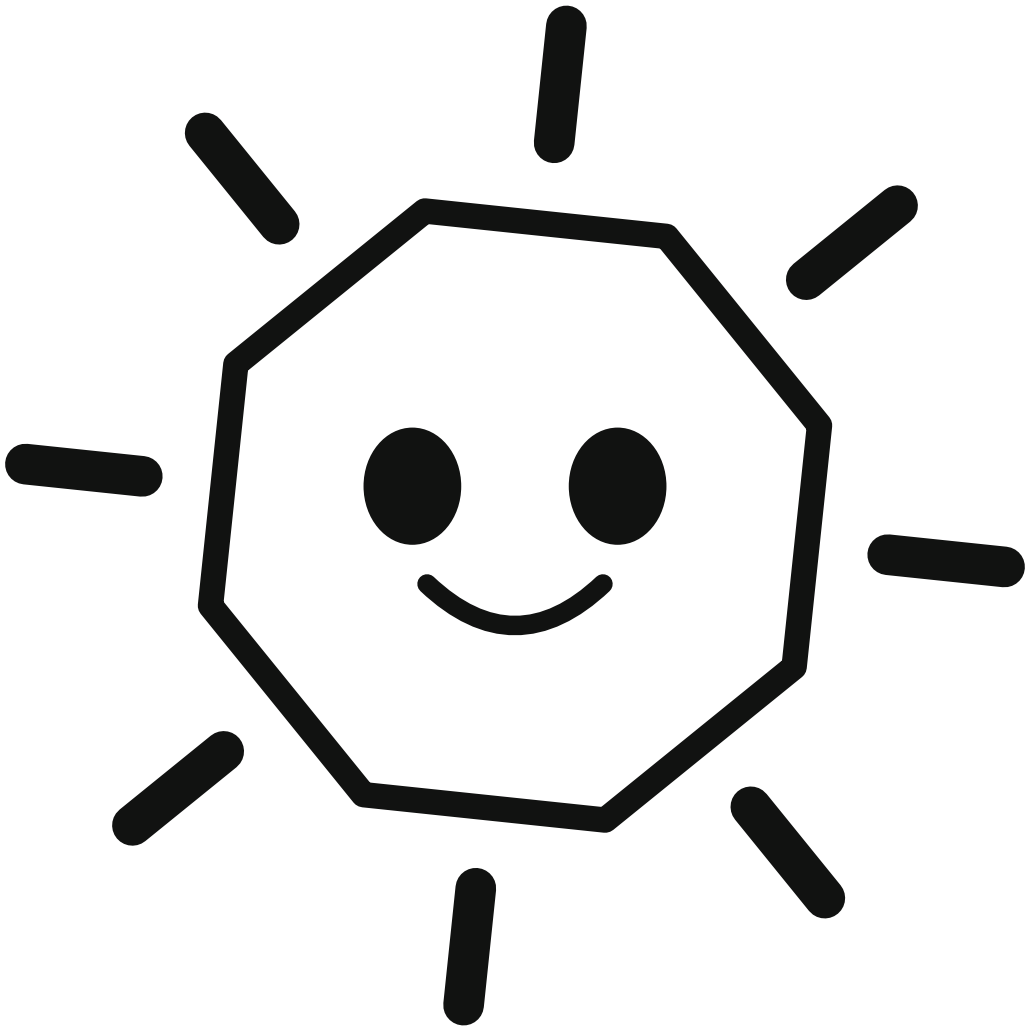

Plants love the sun too

Leaves catch sunlight and use it to make food for the plant. That is why gardens grow well in a bright, kind place.

A thank-you sun

Colour this big sun in the warmest colours you have. Around it, write or draw one thing the sunshine helps you do.

It helps me...

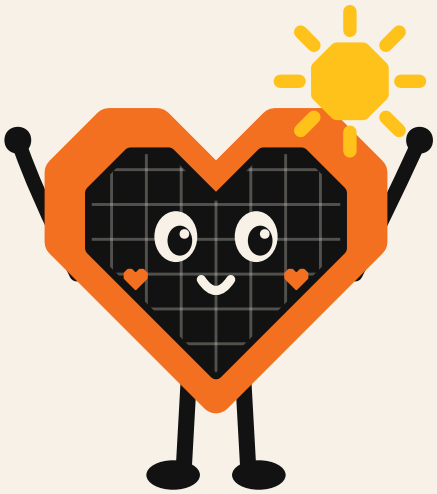

It helps my family...

It helps plants...

It helps the world...
