Draw the sun's path

On a safe, sunny day, go outside with this page and a pencil. Look at where the sun is (never stare at it — glance at the sky around it, or use the shadows). Draw what you see.

A few true things

- The sun rises in the east and sets in the west.
- In the middle of the day the sun is highest, and shadows are shortest.
- The exact path changes a little with the season and where you live. Draw what you see.

Draw the sun in the morning, at midday, and in the evening. Join them with a gentle curve.

What I noticed

Time	Where was the sun?	How long was the shadow?
